
GENEVA POLO SOCIAL CLUB

What We've Built

PLATFORM PROGRESS REPORT

April – May 2026

Prepared for Thierry & the Geneva Polo Club team

The Big Picture

Six weeks ago, the club's membership platform handled one thing: getting a new member from application to approved. Everything else — events, renewals, communications, tracking who's expired, chasing payments — was still manual.

Today, the platform runs the club's day-to-day operations end to end. From the moment someone receives an invite link to the day their membership expires and they're nudged to come back, the system handles it. Events are listed, tickets are sold, attendees are tracked, and branded communications go out to the right people — all from one place.

Here's what changed and why it matters.

1. Events Are Now Managed In-House

Before: Event promotion happened over email and WhatsApp. RSVPs were informal. There was no central attendee list, no way to collect payment online, and door staff had no reliable check-in tool.

Now: The platform is the single source of truth for all club events.

- Public event pages — every event has a shareable, branded page. Non-members see the public price; members see their discounted rate. This doubles as marketing.
- Online ticket sales — members and guests register and pay directly through the site. No manual invoicing, no chasing bank transfers.
- Member-only pricing — the system automatically shows the correct price based on membership status.
- Attendee list with check-in — live attendee list for every event. Door staff can check people in on their phone. The list exports to CSV for print.
- Event types and filtering — events are categorised (Polo, Social, Sport, Lifestyle) so members can browse what interests them.
- Dedicated event coordinator access — event managers can manage events without full admin access to the membership database.

Time saved: What used to require a spreadsheet, manual emails, and day-of coordination is now a single workflow. Creating an event, opening registration, collecting payment, and having a door list ready takes minutes instead of hours.

2. *The Club Has Its Own Communication Channel*

Before: Member communications went through Mailchimp or personal email. List management was manual — export, import, hope the list is current, send. No personalisation, no targeting by tier.

Now: The admin panel has a full broadcast composer with rich text editing, built into the platform.

- Targeted messaging — send to all members, or just specific tiers (e.g., only Gold and Platinum). The audience is always current.
- Personalisation — messages automatically include the member's name, tier, and email.
- Draft and review — compose, save as draft, review, then send when ready. No accidental sends.
- Unsubscribe compliance — members can opt out, and the system respects their preference automatically.

Time saved: A targeted, personalised broadcast to a specific segment now takes 5 minutes instead of 30–45 minutes of list management plus composition in a separate tool.

3. *Memberships Renew Themselves*

Before: When a membership approached its expiry date, someone had to manually check who was expiring, send individual emails, follow up, process payments, and update the spreadsheet.

Now: The entire renewal cycle is automated.

- Reminder emails at 30, 14, and 7 days — members get professionally branded reminders as their expiry approaches. Timing is adjustable from the admin panel.
- Automatic expiry — on the expiry date, the status updates, the digital card deactivates, and the member is notified.
- Self-service renewal — expired members see a “Renew Membership” button in their portal. They choose their tier, pay online, and are reactivated instantly.
- Re-engagement outreach — for lapsed members, the admin can send reactivation emails with a direct link back to the renewal page.

Time saved: Renewal season used to consume days of administrative work per cycle. Now it runs in the background. The admin's role shifts from chasing payments to reviewing the dashboard.

4. *Honorary & Complimentary Memberships Are Effortless*

Before: Inviting a VIP, sponsor, or partner as a complimentary member required a workaround — creating an application, manually overriding payment, manually activating the account.

Now: There's a dedicated flow for honorary members.

- Honorary invite codes — each originator can have a special code for complimentary invitations. The invitee sees only the free tiers.
- No payment required — free-tier applications skip payment entirely. On approval, the member is activated immediately with a full digital card.
- "Renew as Honorary" — when an honorary member's term expires, they can renew without payment in one click.

Time saved: What was a multi-step manual process is now as simple as sharing a link. The VIP applies, the committee approves, and they're in.

5. *The Application Pipeline Is Transparent*

Before: It was hard to see at a glance how many applications were pending, who had been approved but not yet paid, or who started an application but never finished.

Now: The applications page gives full visibility into the pipeline.

- Tab-based view — Pending, Approved, and Incomplete applications are clearly separated with count badges.
- Incomplete application recovery — the system tracks unfinished applications. The admin can send a reminder email with a direct link to resume.
- Approver attribution — every approval shows who approved it and when, creating an audit trail.
- "Awaiting Payment" badge — approved members who haven't completed payment are clearly flagged.

6. *Originator Tracking & Referral Attribution*

Every member who joins can be traced back to the originator who invited them. This isn't just record-keeping — it's the foundation for understanding where growth comes from.

- Unique invite links — each originator has a unique link with their code embedded.
- Referral visibility — who's bringing in the most members, at a glance.

- Permanent relationship — even as members renew year after year, the original referrer is always recorded.
 - Ready for commissions — the payment infrastructure is structured so originator commissions can be introduced when the club is ready.
-

7. AI-Ready: The Platform Can Be Managed by an Agent

This is forward-looking, but already operational. The platform exposes a dedicated set of endpoints that allow an AI assistant to:

- Create and edit events — draft an event, set details, and save it for admin review.
- Draft broadcasts — compose a member communication and save it as a draft for approval.
- Preview audiences — check how many members would receive a broadcast before it's sent.
- Look up members, tiers, and originators — pull reference data for context.

The key principle: the AI can draft, but only a human can publish or send. The club could eventually have an AI assistant handling routine content creation — event announcements, renewal nudges, seasonal newsletters — with the club manager simply reviewing and approving.

8. Payments Are Secure and Automated

- Card authorisation on application — a hold is placed on the card. Funds are only captured after committee approval. If declined, no charge.
 - Payment retry — if a card fails, the applicant gets a secure link to try again without starting over.
 - Event payments — ticket purchases go through the same secure payment flow.
 - All payments tracked — every transaction is recorded with amount, date, and status.
-

9. Real-Time Visibility Into What's Happening

- Analytics — the platform tracks how members use the site: which events get the most views, where people drop off, what pages get visited most.
- Error monitoring — when something goes wrong, the team is notified immediately rather than waiting for a member to complain.

-
- Scheduled jobs dashboard — the admin can see all automated tasks and their status, with the ability to trigger any of them manually.
-

10. Brand & Identity

The platform reflects the Geneva Polo Social Club's identity at every touchpoint:

- Club name updated across all templates — consistent "Geneva Polo Social Club" branding everywhere.
- Professional email sender — all communications come from social@genevapolo.com.
- Custom favicon and branded pages — the club crest appears in browser tabs and bookmarks.
- OTP login — members sign in with a simple 6-digit code sent to their email.
- International phone support — the application form includes a country code selector.

What This Replaces

What used to happen	What happens now
Renewals tracked in a spreadsheet, manually emailed	Automatic 3-stage reminders, self-service renewal, auto-expiry
Event RSVPs via email/WhatsApp, manual attendee lists	Online registration, payment collection, live check-in list
Member communications via Mailchimp with CSV exports	Built-in broadcast composer with live audience targeting
Honorary invitations handled as manual overrides	Dedicated invite flow with one-click approval
No visibility into incomplete or stalled applications	Pipeline dashboard with tabs, badges, and reminder tools
Payment follow-ups done manually after approval	Automatic card hold on apply, capture on approval, retry on failure
No way to re-engage expired members systematically	Bulk reactivation emails with self-service renewal links
Event coordination across multiple tools	Single admin panel for creation, pricing, registration, and check-in

What's Coming Next

- Corporate memberships — for partners like Cardis and Sotheby's, where one company holds a membership with multiple named sub-members.
- Event reminder emails — automated notifications to registrants before their event.
- Partner benefits — a section for member perks and partner offers.
- Originator commissions — financial tracking so referrers can be compensated.

By the Numbers

98 Active Members	123 Total on File	56 Applications Processed
21 Events Created	164 Event Registrations	275+ Automated Emails Sent

Development Metrics

Metric	Value
Features shipped since 1 April	61
Production updates deployed	116
Admin pages built	17
Automated workflows running daily	4
API endpoints powering the platform	51
